AURIXON AI — ILLUSTRATIVE SAMPLE REPORT

24-Hour Business AI & Workflow Audit — $149

Important: This is a fictional, illustrative example created to show the format and depth of the audit. The business, tools, figures, and findings below are invented. They are not real client results, and they are not a promise or guarantee of what your audit will find. Actual findings vary by business.

Fictional client profile: “Maple & Main Home Services” — a made-up 6-person residential services company. Intake answers assumed for this example: 7 software subscriptions, leads arrive by web form and phone, invoices followed up manually, weekly reports rebuilt in spreadsheets.

1. Executive Summary (illustrative)

In this fictional example, the review of 7 subscriptions totaling a hypothetical $486/month flags two overlapping tools and one unused seat, and identifies three manual workflows (lead follow-up, invoice reminders, weekly reporting) as candidates for automation using software the business already pays for. All numbers below are invented for illustration.

2. Tool & Cost Audit (fictional figures)

Tool (fictional example)	Hypothetical cost	Example finding	Example recommendation
AI writing assistant A	$30/mo	Overlaps with assistant B	Keep one, cancel the other
AI writing assistant B	$49/mo	Duplicate of A	Cancel after exporting templates
Automation platform	$49/mo	Only 2 of 12 zaps active	Keep; rebuild 3 useful workflows
Scheduling tool	$16/mo	Reminders turned off	Keep; enable reminders
Design suite	$55/mo	1 unused seat	Remove unused seat
Reporting add-on	$29/mo	Reports rebuilt manually anyway	Evaluate replacing with template

Assumptions: prices are illustrative list prices; actual invoices are reviewed in a real audit. Any savings figures in a real report are estimates based on your actual bills, not guarantees.

3. Workflow Findings (illustrative)

- **Lead follow-up:** In this example, web-form inquiries are copied by hand into a spreadsheet and answered when time allows. Example recommendation: route form entries into one inbox and use a short approved reply template.
- **Invoice reminders:** Fictional finding: overdue invoices are chased manually each Friday. Example recommendation: automatic reminder sequence in the existing invoicing tool.
- **Weekly reporting:** Fictional finding: the same report is rebuilt from three spreadsheets. Example recommendation: one reusable template, refreshed from a single source.

4. Prioritized Action Plan (illustrative example)

1. **Priority 1 — Cancel the duplicate writing assistant** after exporting saved templates (example only).
2. **Priority 2 — Turn on automatic invoice reminders** in the tool already in use (example only).
3. **Priority 3 — Consolidate lead intake** into a single inbox with a one-business-day reply rule (example only).

4. **Priority 4 — Rebuild the weekly report as a template** and re-review the full stack in 90 days (example only).

5. What This Report Is — and Is Not

The $149 audit is a written assessment with prioritized recommendations. It does not include implementation, setup, or configuration work; any implementation help is scoped and priced separately, only if you ask for it. A real report is personalized to your intake answers, prepared with AI assistance and human review, and delivered by email within 24 hours after your completed intake. No calls and no Zoom meetings are required.
